SUMMARY

Software Engineer with experience in AI systems, Android development, and embedded systems. Interested in building scalable intelligent systems spanning full-stack software, edge computing, and autonomous agents.

EDUCATION

University of California, Los Angeles

Bachelor of Science in Computer Science and Engineering
Minor: Bioinformatics

June 2027
GPA 3.98/4.0

Relevant Coursework: Design and Analysis of Algorithms (CS180), Operating Systems (CS111), Computer Networks (CS118), Machine Learning (CS M146), Introduction to AI (CS161), Computer Vision Foundations (CS149)

SKILLS

Programming: C++, Python, Java, Kotlin, JavaScript/TypeScript, HTML/CSS

Frameworks/Tools: React, Next.js, React Native, Jetpack Compose, Node.js, MongoDB, Git/GitHub, Mapbox

AI/Hardware: Machine Learning, Computer Vision, LLMs, Embedded Systems, ESP32, PCB Design, MQTT

HIGHLIGHTED EXPERIENCES AND PROJECTS

Leechy (Rental Marketplace)

07/2025-present

Lead Android Engineer

- Architected and developed a production-scale Android marketplace using Kotlin, Jetpack Compose, MVVM, and modular clean architecture spanning 50+ feature modules.
- Designed and optimized real-time geospatial search using Mapbox, clustering, caching, and location-based filtering to improve scalability and reduce network requests.
- Owned development of booking workflows, payment processing, subscription management, availability scheduling, and backend marketplace infrastructure.
- Engineered asynchronous networking, resilient state management, and data synchronization across complex user workflows.
- Collaborated closely with backend engineers to design scalable APIs and business logic supporting thousands of marketplace interactions.

Trustworthy AI Lab

06/2026-present

AI Research Assistant

- Developed a Python runtime adapter connecting large language model agents to Pokémon Showdown environments for autonomous gameplay experimentation.
- Implemented interfaces translating environment observations into agent-readable context and converting agent outputs into executable game actions.
- Built battle logging, evaluation utilities, and runtime abstractions supporting reproducible AI experiments.
- Collaborated on an agentic AI research platform for evaluating autonomous decision-making systems.

LEADERSHIP AND EXTRACURRICULAR ACTIVITIES

Rocket Project, Los Angeles, CA

09/2023-06/2026

Electrical Ground Support Equipment Lead / Controls Lead

- Collaborated across controls, electrical, propulsion, and software teams to integrate launch systems.
- Designed and implemented ground control/data collection systems with custom PCBs, ensuring robust real-time interfacing with propulsion hardware.
- Developed Prometheus' first wireless ground communication system, implementing MQTT-based communication to enable remote operations and telemetry streaming.
- Led development of a closed-loop propellant throttling system, integrating custom hardware with PID control and comprehensive FDIR for precise and fault-tolerant flow regulation.

Creative Labs, Los Angeles, CA

09/2024-06/2025

Mobile Developer Lead

- Led a team of 3 to build a gamified React Native app for learning coding concepts, designing interactive features with engaging UI and backend integration.
- Designed engaging frontend features (problems, rankings, currency, progress tracking) and backend services with REST APIs, secure authentication, and scalable data storage in MongoDB.
- Established structured issue tracking and team workflow, improving development efficiency and coordination.
